

# compensating

This is a way of adding or subtracting numbers when one of them ends in 1 or 2 or 8 or 9.

Take the number that ends in 1, 2 8 or 9 and change it to the nearest 10 or multiple of 10.

If you **add** a number at the start then you must **subtract** it at the end.

If you **subtract** a number at the start then you must **add** it at the end.

$$34 + 9 = 34 + 10 - 1 = 44 - 1 = 43$$

$$70 - 8 = 70 - 10 + 2 = 60 + 2 = 62$$
